

We do more than building buildings.
We're building *solutions.*

ARCHITECTURAL METAL ROOFING

WESTSIDE BAPTIST CHURCH

FORT PIERCE

Scope and Responsibilities:

Following the devastation that the 2004/2005 hurricane seasons had on existing roofing systems, many building owners determined to invest in the durability and weather tightness that architectural standing seam metal roofing systems provide. Westside Baptist Church was one such owner, opting to replace their existing asphalt shingle roofs with **Butler Manufacturing's VSR Standing Seam Metal Roof** on their original Sanctuary and Classroom Buildings, structures that Richard K. Davis Construction Corporation (RKDCC) had built years earlier. In 2006, as RKDCC embarked on the church's largest construction endeavor to date in the development of a new 1,740 seat sanctuary, it was a no-brainer to create aesthetic harmony in the use of **Butler's VSR Standing Seam Metal Roof**, establishing a signature look for the campus of 118,7587 square feet of beautiful blue Butler roofing.

Date of Completion/Square Footage:

2009/57,702 New Sanctuary/Admin./Nursery
2006/24,982 Family Life Center
2005/22,808 Original Sanctuary/Classrooms
2005/3,205 Young Adult House
