

We do more than building buildings.  
We're building *solutions.*

INDUSTRIAL

## WASTE MANAGEMENT

### FORT PIERCE

#### Scope and Responsibilities:

Waste Management, Inc. of Florida chose the local experience of Richard K. Davis Construction Corporation (RKDCC) to construct their first single stream garbage transfer station in St. Lucie County for the city of Fort Pierce. Their choice was made primarily due to RKDCC's wealth of experience with pre-engineered metal building systems through their 40+ years of self-performing erection services. That in conjunction with Waste Management's philosophy to buy their construction services locally and RKDCC being the most cost competitive bid helped make their decision easy. The complexities of this project included structural heavy duty concrete floor slabs and "push walls" to withstand the equipment operation inside, loading and scale pits and the massive clear span metal building frames, all of which were satisfactorily completed in advance of the tight timeline provided by contract.

**Date of completion:**  
June 2013

**Total square footage:**  
9900 Building

**Contact:**  
**Jeff Sabin**  
*Director of Public Sector Services*

**Design Partners:**
